BLUETONGUE- THE RISKS

CALL US TODAY TO SPEAK ABOUT THE BEST COVER FOR YOUR **HERD OR FLOCK**

KEY CONSIDERATIONS

- Blue Tongue is a seasonal disease due to behaviour of midge population (see the graph)
- This therefore allows it to be quite predictable
- Vaccination will be most effective if given before the vector high period so that you are covered pre danger
- Classical BTV generally comes in 3 – 4 year waves
- It is also worth considering the economic impact

BTV Outbreaks reported to WOAAH by Month summed over the past years based on Start date of the outbreak
